

Safety Management in a Research Environment

Who should attend

Staff involved in project management and/or who have major responsibilities for risk management (nominations via relevant line management)

Staff who may not be directly involved in research projects but who's roles may influence the effective operation of such projects (nominations via relevant line management)

Aims

- To introduce the concept of a Safety Management System, including the element of risk assessment/risk management in such a system

Objectives

On completion of the course, delegates will be able

- To identify Health and Safety Legislation and to describe Law as applicable to Health and Safety
- To identify their own enforcing authority and their associated powers
- To prepare for Health and Safety Audit
- To describe the principles of accident causation and prevention
- To describe the elements of active and reactive monitoring
- To carry out hazard identification and apply risk management techniques
